Anti-panic button • Series 484

- **Silent operation**
- **Protection against opening**
- **Version with LED memory**

Reed button designed for the silent signalling of robberies in action. By pushing the button, a magnet gets close to the internal reed and opens the contact, thus triggering the alarm. Self-protection against opening through internal reed. Internal reeds are designed for NC operation.
Simplified installation thanks to the two-sided tape included.
The button is approved IMQ Lev. III and PPTT.
Version 484-I is equipped with self-retaining button.

To reset, a specific key included in the package is necessary.
4-terminal connection: 2 for contact and 2 for anti-tampering.
Version 484-ME: LED memory with central reset (by cutting power supply), button with spring return.
6-terminal connection: 2 for contact, 2 for anti-tampering, 2 for 12 Vdc power supply.

Model only Leds 484-ME

Key recovery model only 484-I
