

VM651P

Movable Mounting Kit

Movable Mounting Kit

The VM651P movable mounting kit provides extra protection for the door. When mounted, it prevents opening the door when the seismic detector is on the night position plate. Furthermore, it can be wired to inhibit arming of the system when the detector is on the day position plate - thus making it impossible for the staff to forget to shut the door.

Standard Features

VM651P

Movable Mounting Kit
